

Cemented Leaded Wirewound Resistors

The AC series is the perfect choice for general purpose power applications. The AEC-Q200 qualified AC-AT series is best suited for automotive applications. The robust silicon cement coating can handle challenging ambient and operating conditions. Typical applications include but are not limited to energy meters, power supplies and automotive electronics. For a given application, requirements of ohmic value, rated power, peak voltage, pulse shape, pulse duration, lead bending, and environmental conditions may be submitted to recommend the most suitable product.

Various lead forms are available such as RT (radial taped), WSZ (Z-form), DK (double kink), EK (single kink) with defined mounting pitch.

FEATURES

- AEC-Q200 qualified AC-AT series
- High power dissipation in small design
- Non-flammable coating conforming to UL 94 V-0
- Excellent pulse load capability
- Non-inductive (NI) version available
- WSZ-form lead bending available for SMD mounting
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

Note

⁽¹⁾ Manufacturing at different production locations may involve use of differently sized box

DESCRIPTION

Wirewound resistors are best suited for use in high power, high current applications. The silicon cement lacquer coating enables AC series to withstand challenging operating and environmental conditions. The coating is resistant to cleaning solvents specified in IEC 60115-1 ⁽¹⁾. Production is strictly controlled and follows an extensive set of instructions established for reproducibility.

The winding is done with a specific material on a specially developed fine ceramic body (Al_2O_3). The ceramic meets the highest requirements against mechanical resistance, thermal shocks, dielectric strength, and insulation resistance at high temperatures. With different diameters and turn spacings of resistive wire, a large ohmic value range can be covered.

The resistors are marked with resistance, rated dissipation (P_{40}) and tolerance. Product quality is verified by testing procedures, performed on all individual resistors. Resistance is measured on the lead wires at a distance of 6 mm from the resistor body. If a greater length of lead wire is used in the application, the user may need to consider the additional wire resistance, particularly with low resistance products.

MATERIALS

Vishay acknowledges the following systems for the regulation of hazardous substances:

- IEC 62474, Material Declaration for Products of and for the Electrotechnical Industry, with the list of declarable substances given therein ⁽²⁾
- The Global Automotive Declarable Substance List (GADSL) ⁽³⁾
- The REACH regulation (1907/2006/EC) and the related list of substances with very high concern (SVHC) ⁽⁴⁾ for its supply chain

The products do not contain any of the banned substances as per IEC 62474, GADSL, or the SVHC list, see www.vishay.com/how/leadfree. Hence the products fully comply with the following directives:

- 2000/53/EC End-of-Life Vehicle Directive (ELV) and Annex II (ELV II)
- 2011/65/EU Restriction of the Use of Hazardous Substances Directive (RoHS) with amendment 2015/863/EU
- 2012/19/EU Waste Electrical and Electronic Equipment Directive (WEEE)

Vishay pursues the elimination of conflict minerals from its supply chain, see the Conflict Minerals Policy at www.vishay.com/doc?49037.

Notes

- ⁽¹⁾ Other cleaning solvents with aggressive chemicals should be evaluated in actual cleaning process for their suitability
- ⁽²⁾ The IEC 62474 list of declarable substances is maintained in a dedicated database, which is available at <http://std.iec.ch/iec62474>
- ⁽³⁾ The Global Automotive Declarable Substance List (GADSL) is maintained by the American Chemistry Council and available at www.gadsl.org
- ⁽⁴⁾ The SVHC list is maintained by the European Chemical Agency (ECHA) and available at <http://echa.europa.eu/candidate-list-table>

ASSEMBLY

The resistors are axial leaded for soldering. The terminals of the resistors are completely lead (Pb)-free, the special tin plating provides compatibility with lead (Pb)-free and lead-containing soldering processes.

Special lead forms may be available on request, please inquire at ww1resistors@vishay.com. These components are high dissipation power resistors, customers are advised to use a high melting point solder.

APPLICATION INFORMATION

The power dissipation of the resistor generates a temperature rise with respect to the ambient. The permissible dissipation is derated for temperatures above 40 °C, as shown in the derating diagram, in order to avoid overheating of the resistor. The heat dissipated from the resistor may affect adjacent components, hence proper clearance will be required in order to avoid overheating. The resistive wire is encapsulated by a protective lacquer coating.

All materials used are non-flammable and inorganic.

These resistors do not feature a limited lifetime when operated within the permissible limits. However, resistance value drift increasing over operating time may result in exceeding a limit acceptable to the specific application, thereby establishing a functional lifetime.

APPROVALS

The AC-AT series is AEC-Q200 qualified, specifically for use in automotive applications.

RELATED PRODUCTS

UL approved, special cement coated fusible resistor is also available. For details please see the datasheet:

“AC01-CS, AC03-CS, AC05-CS - Axial Cemented Fusible Wirewound Safety Resistors” www.vishay.com/doc?28909

For high surge wirewound products, silicon cement coated Z300-Cxx series is available, see the datasheet:

“Z300-Cxx - High Surge Axial Cemented Wirewound Resistors” www.vishay.com/doc?21027

For precision applications, cement coated PAC series is available, see the datasheet:

AC03 and AC03-AT Pulse on a regular basis; max. permissible peak pulse power ($\hat{P}_{max}$) as a function of pulse duration (t_i)

AC04 and AC04-AT Pulse on a regular basis; max. permissible peak pulse power ($\hat{P}_{max}$) as a function of pulse duration (t_i)

AC05 and AC05-AT Pulse on a regular basis; max. permissible peak pulse power ($\hat{P}_{max}$) as a function of pulse duration (t_i)

AC07 and AC07-AT Pulse on a regular basis; max. permissible peak pulse power ($\hat{P}_{max}$) as a function of pulse duration (t_i)

AC10 and AC10-AT Pulse on a regular basis; max. permissible peak pulse power ($\hat{P}_{max}$) as a function of pulse duration (t_i)

PULSE DIAGRAMS

Pulse energy in joules or wattseconds is calculated with the help of the R -value to be used in the application. Choose the R value on X axis and look for the corresponding E (Ws/ Ω) value on Y axis. Multiplying both the R (Ω) to corresponding E (Ws/ Ω), will be resultant total pulse Energy (Ws or J) for adiabatic conditions.

AC01 and AC01-AT Pulse capability; E (Ws) as a function of R (Ω)

AC03 and AC03-AT Pulse capability; E (Ws) as a function of R (Ω)

AC04 and AC04-AT Pulse capability; E (Ws) as a function of R (Ω)

AC05 and AC05-AT Pulse capability; E (Ws) as a function of R (Ω)

AC07 and AC07-AT Pulse capability; E (Ws) as a function of R (Ω)

AC10 and AC10-AT Pulse capability; E (Ws) as a function of R (Ω)

AC01 and AC01-AT Pulse on a regular basis; max. permissible peak pulse voltage ($V_{max.}$) as a function of pulse duration (t_i)

AC03 and AC03-AT Pulse on a regular basis; max. permissible peak pulse voltage ($V_{max.}$) as a function of pulse duration (t_i)

AC04 and AC04-AT Pulse on a regular basis; max. permissible peak pulse voltage ($V_{max.}$) as a function of pulse duration (t_i)

TESTS PROCEDURES AND REQUIREMENTS

All tests are carried out in accordance with the following specifications:

- IEC 60115-1, generic specification (includes tests)

The test and requirements table contains only the most important tests. For the full test schedule refer to the documents above.

The tests are carried out in accordance with IEC 60068-2-xx test method and under standard atmospheric conditions in accordance with IEC 60068-1, 5.3.

Climatic category -40 / 200 / 56 (rated temperature range: lower category temperature, upper category temperature; damp heat, steady state, test duration: 56 days) is valid.

Unless otherwise specified the following values apply:

- Temperature: 15 °C to 35 °C
- Relative humidity: 45 % to 75 %
- Air pressure: 86 kPa to 106 kPa (860 mbar to 1060 mbar)

For performing some of the tests, the components are mounted on a test board in accordance with IEC 60115-1, 4.31.

In test procedures and requirements table, only the tests and requirements are listed with reference to the relevant clauses of IEC 60115-1 and IEC 60068-2-xx test methods. A short description of the test procedure is also given.

TEST PROCEDURES AND REQUIREMENTS				
IEC 60115-1 CLAUSE	IEC 60068-2 TEST METHOD	TEST	PROCEDURE	REQUIREMENTS PERMISSIBLE CHANGE ($\Delta R_{MAX.}$)
4.13	-	Short time overload	Room temperature; 10x rated power P_{40} ; 5 s	$\pm (2 \% R + 0.1 \Omega)$
4.16	21 (Ua) 21 (Ub) 21 (Uc)	Robustness of terminations	Tensile, bending and torsion	No damage $\pm (0.5 \% R + 0.05 \Omega)$
