

### features

- Superior to RK73B/RK73H series in surge withstanding voltage and high power
- Resistance tolerance is available from  $\pm 0.5\%$
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

\*<sup>1</sup> Cold T.C.R. (-55°C ~ +25°C) is +150 x 10<sup>-6</sup>/K

\*<sup>2</sup> Applies when power rating is 0.4W or lower.

Rated voltage =  $\sqrt{\text{Power rating} \times \text{resistance value}}$  or max. working voltage, whichever is lower

Please contact KOA Speer for how to handle a specific surge/pulse

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

## environmental applications

### Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

If you want to use the rated power of <sup>2</sup>, please use the derating curve based on the terminal part temperature above.

For more details, please visit [www.koaspeer.com](http://www.koaspeer.com) and go to "Resources," then "Technical Information," and select "[Derating Curves – Caution & Terms.](#)"

**ESD Limiting Voltage**

**Temperature Rise**

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.
